

Project Design Phase-II

Data Flow Diagram & User Stories

Date	03 October 2026
Team ID	SWTID-2026-6200
Project Name	The Customer Support Ticket Priority Prediction and Automated Assignment System using Agentforce
Maximum Marks	4 Marks

Data Flow Diagram (DFD)

A Data Flow Diagram (DFD) is a visual representation of how information flows through the Smart Customer Support Ticket Management System using Salesforce CRM and Agentforce. It helps in understanding how customer support requests are received, analyzed, prioritized, assigned to agents, and processed based on their urgency.

Key Features of the DFD for this Project:

Shows how users provide Account Name or submit customer support requests.

Displays how Agentforce retrieves and analyzes the latest support ticket associated with the account.

Shows how the ticket description is analyzed to determine the appropriate priority level.

Depicts the decision-making process for classifying tickets as High, Medium, or Low priority.

Shows how Salesforce Flow automatically assigns tickets to the appropriate support agent.

Displays how high-priority tickets generate urgent tasks for faster resolution.

Shows how ticket, account, customer, and assignment information is stored and managed in Salesforce.

Depicts how the final priority, assignment, and support response are provided to the user.

Customer Journey Map

The Customer Journey Map represents the different stages a customer support request goes through from the initial ticket creation to final resolution. The process combines Agentforce AI

analysis and Salesforce Flow automation to reduce manual effort and improve support efficiency.

Stages:

Ticket Creation → Account Identification → Latest Ticket Retrieval → Ticket Description Analysis → Priority Classification → Agent Assignment → Urgent Task Creation (if applicable) → Support Handling → Resolution

Stage Description:

Ticket Creation: Customer support request or ticket is created in Salesforce.

Account Identification: The system identifies the customer account associated with the request.

Latest Ticket Retrieval: The latest support ticket related to the account is retrieved.

Ticket Description Analysis: Agentforce analyzes the ticket description to understand the issue.

Priority Classification: The ticket is classified as High, Medium, or Low priority.

Agent Assignment: Salesforce assigns the ticket to the appropriate support agent.

Urgent Task Creation: For high-priority tickets, an urgent task is automatically created through Salesforce Flow.

Support Handling: The assigned agent reviews and handles the customer issue.

Resolution: The issue is resolved and the final response is provided to the customer.
