

**Project Design Phase
Proposed Solution Template**

Date	03 October 2026
Team ID	SWTID-2026-6200
Project Name	The Customer Support Ticket Priority Prediction and Automated Assignment System using Agentforce
Maximum Marks	2 Marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Manual support-ticket processing causes delays in priority identification, task creation, agent assignment, and SLA monitoring. Urgent tickets may be missed, and agents spend time manually analyzing ticket information.
2	Idea / Solution Description	Implement an automated **Support Ticket Intelligence solution using Salesforce and Agentforce [™] . The solution provides automatic ticket analysis, priority classification, high-priority Task creation, agent assignment, SLA risk checking, and conversational ticket analysis through Agentforce
3	Novelty / Uniqueness	Combines **Salesforce Flow automation and Agentforce AI** in a single support workflow. It reduces manual intervention and provides conversational access to ticket summaries, priority details, SLA status, and recommended actions.
4	Social Impact / Customer Satisfaction	Improves customer support by helping agents identify and handle urgent issues quickly. Reduces manual workload, improves response consistency, and helps prevent SLA-related delays.
5	Business Model (Revenue Model)	Can be implemented by organizations using Salesforce as their customer-support platform. Business value comes from reduced manual effort, faster ticket handling, improved SLA management, and increased support-agent productivity.
6	Scalability of the Solution	The solution can scale with increasing support-ticket volumes, users, Accounts, Contacts, and Tasks using Salesforce cloud infrastructure. Future enhancements can include additional Agentforce actions, advanced analytics, more SLA rules, and external system integrations.
