

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	03 October 2026
Team ID	SWTID-2026-6200
Project Name	The Customer Support Ticket Priority Prediction and Automated Assignment System using Agentforce
Maximum Marks	4 Marks

Functional Requirements

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Support Ticket Creation & Management	- Create support ticket using Salesforce Case - Capture ticket subject and description -View, update, and manage ticket status -Maintain ticket history and activity
FR-2	Account & Contact Association	- Associate ticket with Account -Identify issue category and customer impact -Retrieve relevant customer information -Maintain customer-ticket relationship
FR-3	Ticket Description Analysis	-Analyze ticket subject and description - Identify issue category and customer impact - Extract urgency-related information - Generate ticket summary using Agentforce
FR-4	High-Priority Task Creation	- Identify High/Critical priority tickets -Automatically create follow-up Task - Assign Task to appropriate support agent -Set Task priority and due date based on configured SLA
FR-5	SLA Breach Risk Checking	- Track Case SLA deadline - Identify tickets approaching SLA breach -Mark ticket as On Track, At Risk, or Breached - Notify support agent for SLA-risk tickets
FR-6	Agentforce Conversational Analysis	- Allow support agents to interact with Agentforce -Retrieve latest support-ticket information -Provide ticket summary and priority explanation -Provide SLA status and recommended next actions

Non-functional Requirements

Following are the non-functional requirements of the proposed solution.

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	The system should provide a clear and user-friendly Agentforce interaction. Priority classifications, SLA alerts, and ticket analysis should be easy for support agents to understand.
NFR-2	Security	Customer, Account, Contact, and Case information must be protected using Salesforce authentication, authorization, sharing rules, profiles, permission sets, and field-level security.
NFR-3	Reliability	The system should consistently classify ticket priority according to configured business rules and reliably execute ticket assignment, task creation, and notifications.
NFR-4	Performance	The system should retrieve and analyze the latest support ticket efficiently. Case retrieval, priority classification, and Agentforce responses should be optimized to minimize processing delays.
NFR-5	Availability	The solution should leverage Salesforce platform availability and should remain accessible to support users with minimal service interruption. Planned maintenance should be communicated in advance where applicable.
NFR-6	Scalability	The solution should support increasing volumes of support tickets, users, Accounts, Contacts, and Tasks without requiring major architectural changes.
NFR-7	Maintainability	Flow, priority rules, SLA conditions, Case assignment logic, and Agentforce actions should be configurable and easy to modify when business requirements change.
